DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Response to Arguments

2. Applicant's arguments with respect to claims 11 and 12 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chang et al. US 6,580,537 B1 in view of Kitayama et al. JP 2000-209186 (Kitayama).

Chang disclosed a routing method whereby address labels bits are encoded at a wavelength and sub-carrier frequencies (see Figure 12, f1, f2, f3, and col./line: 19/40-67, 20/1-20). Chang does not disclose wherein each bit has a separate wavelength. Kitayama disclosed using plural wavelengths and time differential to encode signals (see abstract, Figure 7).

It would have been obvious to one of ordinary skill in the art at the time of invention to use a

separate wavelength and time differential rather than a subcarrier wavelength for each bit as in the Chang invention in order to more readily filter, recognize and route packets via a multi-wavelength transmitter and router.
